

1. **Br. parvifolium** (*Restrepia parvifolia* Lindl. in *Orch. Linden*, No. 18); foliis acuminatis subtus albidis—*New Grenada*, Linden (*on the slope of the Peak of Tolima, creeping among mosses and over old stunted trees at 12000' of elevation*) h. s. sp.—The flowers are fully $1\frac{1}{2}$ " long, far larger than in the other species; "yellow, slightly streaked with red," *Linden*. With their lip and column I am unacquainted.
