

116. — k. — *ONCIDIUM VERRUCOSUM* Rehb. fil. Mss. Lindl. F. l. c. p. 4:

*B. sepalis* lateralibus longissimis, *petalis* anguste caudatis, *labello* obovato-lanceolato acuto verrucoso, *lamellis* villosis antice bidentatis recurvis.

? *B. odontoglossoides* Klotzsch in Bot. Ztg. 1847, p. 942.

*B. coryandra* Morren in Ann. Gand., IV. 295.

*B. Cowani* Hort.

Flowers many times larger than in *B. aristata*, on long slender scapes, pale green except the lip which is white with green warts. It is impossible to doubt that Morren's *B. coryandra* is to be referred here, for although in his specific character, speaking of the lip, he says, „*tuberculis nullis*,“ yet this is entirely contradicted in his French text. Since no such *Brassia* is known to inhabit Brazil, the statement that the plant came from St. Catharine seems to have been a mistake.

Wild in Guatemala—Barker.
