

7. *C. alaris* ; sepalis patentibus : interioribus rhombeis antrorsis intus varicosis ; exterioribus reflexis ; inferioribus oblongis apice cucullatis carnosis, labello sessili cucullato : lobis lateralibus venosis intermedioque carnosio rotundato glandulosis.

Juxtà *Conception*, Octobre floridam, invenit McRae, (v. s. sp.)

*Stem* about a foot and a half in height. *Leaves* broad, short, ovate-oblong, not rising up the stem, which is unusually stout, and clothed with long and broad squamæ. *Spike* nearly half the length of the plant. *Flowers* distant, longer than the membranous bractææ. *Sepals* much spreading ; the outer reflexed ; the *upper* lanceolate, veiny ; *lower* veiny, with a fleshy dilated cochleate apex ; *inner*, by a twist of their unguis turned forward, and overlapping each other by their posterior margins, rhomboid-lanceolate, slightly denticulate, painted as it were with varicose anastomosing veins. *Labellum* three-lobed, cucullate, unguiculate, the lateral lobes erect, membranous, crenated, the middle one fleshy and densely crested.
