

? 2. † *C. Gavilu.*

*Epipactis* amplo flore luteo vulgo Gavilu. *Feuillée. Peruv. 2. p. 29. t. 18.*

*Cymbidium* luteum. *Willd. sp. pl. 4. 106.*

Spontè crescit in *Chile*, locis humidis. *Feuill.*

This is extremely like the last, from which it is certainly possible that it may not be different; I, however, have seen no specimens which fully agree with Feuillée's figure; but while I think it necessary to separate this from *C. disoides*, till something further shall have been ascertained, I am also bound to add, that the grounds upon which I form my belief are too vague to deserve being particularized.
