

bb. Furfuraceae Rchb. fil. l. c.

20. ELLEANTHUS HYMENOPHORUS. *Evelyna hymenophora* Rchb. in v. Schldl. B. L.
1852. 711:

Caule simplici, vaginis (in sicco saltem) profunde sulcatis, foliorum
laminis oblongis, acutis, membranaceo-pergameneis brevioribus, spatha
pandurata, naviculari, hinc muriculata, spica recurva (in sicco!), abbreviata,
bracteis oblongis acutis navicularibus, scariosis, hinc muriculatis
flores aequantibus, ovariis gibberosis (!), muriculato papillosis, perigonii
phyllo summo oblongo acuto, basi cuneato, lateralibus oblongis acutis,
lateralibus internis ligulatis, obtusiusculis, nunc valde cuneatis, labello
orbiculari, fimbriato, basin versus marginibus implicatis contracto, fovea
clausa ope membraneae semilunaris retrorsae post anthesin lacerae,
callis baseos 2 triangulis.

Blätter wie bei *E. oligantha*, aber spitz, nicht zugespitzt. „Blüthen schwefelgelb.“
Chiriqui Cordilleren. 6—7000'. Decbr. v. Warszcewicz.
