

145. DICRYPTĀ *dīscōlōr* (G. Loddiges *ms.*) ; foliis latis papyraceis subtus discoloribus, labello linguæformi lineâ mediâ elevatâ villosâ, antheræ margine angulisque papillosis.

For this addition to the genus *Dicrypta* I am indebted to Messrs. Loddiges, who imported it from Demerara. It is remarkable for the deep purple colour of the underside of the leaves, and its lip has a thick villous line running from the base almost to the apex. The flowers are orange-coloured, about the size of those of *D. Baueri*, and the species is altogether handsomer.
