

1. IONOPSIS SATYRIOIDES Rchb. fil. Mss. Huc: *Ionopsis testiculata* L. O. 193. Fol. 1:

l. foliis tereti-subulatis, sepalis acutis basi connatis, petalis longioribus obtusis apice patentibus, labello ovato-acuminato, sacco didymo-ventricoso.

*Epidendrum Satyrioides* Swartz, Prodr. 123.

*Dendrobium testiculatum* Swartz, Fl. Ind. Occ., p. 1533.

Leaves two or three inches long. Scape filiform, three or four times as long as the leaves, simple or occasionally divided, few-flowered, with some minute sheathing scales. Flowers from three to six, small, appearing in the spring, white, with the fragrance of violets. Lip and petals veined with crimson.

Wild in the West-Indies, occasionally; on the mountains of St. Domingo and Jamaica, on the *Crescentia*—Swartz.
