

67. BRASAVŌLĂ *glāucă*; foliis coriaceis oblongis obtusis planiusculis glaucis, spathâ uniflorâ, sepalis petalisque lineari-lanceolatis obtusis herbaceis, labello subsessili subrotundo acuto margine lobato, clinandrio dentato denti dorsali apice glanduloso.

A most curious Orchidaceous plant, obtained near Vera Cruz for the Horticultural Society by Mr. Hartweg. Its habit is so much that of a *Cattleya* that till it flowered it was expected to belong to that genus. It however proves to be a *Brasavola*, with very large flowers. A figure of it is in preparation for Mr. Bateman's noble work on the plants of this order from Mexico and Guatemala.
