

21. SCAPHYGLÖTTIS *reflexa*; foliis semiteretibus supra planis sulcatis apice integerrimis, sepalis lateralibus ovato-triangularibus reflexis, petalis linearibus obtusis, labello oblongo-emarginato obtusissimo undulato medio refracto.

A branching, straggling plant, with slender leaves, and solitary, pale, dull-yellow flowers, with a crimson stain along the middle of the lip. Like the rest of the genus it is a species quite destitute of beauty. It was obtained by Messrs. Loddiges from Demerara.
