
SPECKLINIA.

To this genus is to be added the following:—

S. atropurpurea; vaginis caulis 2-3 ventricosis, folio oblongo piano 7-9-venio, flore solitario subsessili, petalis 3-cuspidatis, labelli laminâ sagittatâ.—
In Jamaica. (*Exam. s. cult. in herb. Hooker. ex horto Liverp.*) Folium 2½ poll. longum, basi angustatum. Vaginæ infundibulares, pollicem longæ, in caulem 2-pollicarem. Flores atropurpurei. Ovarium lineam longum, hexapterum; alis apice truncatis petalinis minoribus. Alabastrus quem tantum vidi semunciam longus, angustus, falcatus. Sepala anteriora basi gibbosa, oblongo-linearia. Petala nana, vix 2 lineas longa, ovata, 3-cuspidata, obliqua, saepius venâ alterâ excurrente, alterâ in dimidio majore petali abbreviatâ. Labellum unguiculatum, in columnam primum, cum ejus basi articulatum; ungue linearis, 3-venio axi cristato, laminâ sagittatâ apicibus posticis obtusis. Columna petaloideo-alata, apice tridentata, basi paulò producta; pédis marginibus carnosis rotundatis medio unidentatis. Anthera parva 1-locularis. Pollinia 2, pyriformia, atropurpurea, apice materie diaphanâ granulosâ stigmati adhaerentia.

And probably several spurious *Dendrobia* of authors, especially—
