

The three species of this group possess a vegetative similarity to *Chondrorhyncha*, but with small, distinct pseudobulbs concealed in the leaf bases. Members of this genus are clearly distinguished by the very narrow 2- or 4-toothed basal callus, the short chin and the presence of pseudobulbs. Pupulin (2000: 22) illustrates *S. lankesteriana*.

Stenotyla lankesteriana* (Pupulin) Dressler, *comb. nov.

Basionym: *Chondrorhyncha lankesteriana* Pupulin, *Lindleyana* 15: 21. 2000.

Stenotyla lendyana* (Rchb.f.) Dressler, *comb. nov.

Basionym: *Chondrorhyncha lendyana* Rchb.f., *Gard. Chron. n.s.* 26: 103. 1886.

Stenotyla picta* (Rchb.f.) Dressler, *comb. nov.

Basionym: *Warczewiczella picta* Rchb.f., *Gard. Chron. n.s.* 20: 8. 1883.
