

2. *MAXILLĀRĪĀ foveātā*; foliis lanceolatis undulatis plicatis racemo triplo longioribus, bracteis linearibus sphacelatis ovario longioribus, sepalis petalisque lineari-oblongis obtusiusculis, labello postico oblongo apice trilobo: laciniâ mediâ rotundatâ carnosâ excavatâ, disco ter aut quinquies sulcato.

A new species from Demerara, for which I am obliged to Messrs. Loddiges. It is very near *M. squalens*, but has a different lip, and its flowers are of a pale uniform dull straw colour. They have a faint, and not unpleasant, smell.
